

The package room access control system is a highly effective stand-alone solution for communities. When used in conjunction with a Package Concierge® locker system, the Package Room essentially eliminates the handling of incoming packages by community staff.

### The Package Room ...

- Provides space for packages that are too large to fit in the automated package locker system
- Creates overflow space for packages when the lockers are full during peak periods of use
- Supplies an indoor package management solution for communities with space constraints
- Accommodates appliances for deliveries that may require refrigeration
- Provides properties with an alternative space for carrier pick-up of outbound and return packages

This sleek surface-mounted kiosk contains a computer, touchscreen, barcode reader and camera.

The kiosk measures 10 inches wide x 12.25 inches high x 4 inches deep.

Constructed of steel, the kiosk exterior is finished in a durable powdercoat finish available in Black or White.

Detailed site preparation specification guidelines are provided to facilitate a seamless package room system installation.

The **Package Concierge® Package Room** operates with the same innovative software as the locker systems with an added enhancement that includes a multi-package deposit process to ensure fast and accurate package delivery.
