![Package Concierge®]

Handle Peaks & Large Items

Access-Controlled Package Rooms

Place the Package Room system near your mailroom, using an existing outdated and/or under-utilized community space at your property to create a secure location for oversized items like furniture, mattresses, tires, kayaks and more.

When paired with any Package Concierge® smart Locker series, the access-controlled Package Room effectively eliminates 100% of the package handling in your community by creating space for overflow during peak delivery times.

A great indoor package management solution for those with space constraints, it can accommodate appliances for deliveries needing refrigeration. It also provides space for carrier pick-up of outbound and return packages, relieving congestion in the management office.
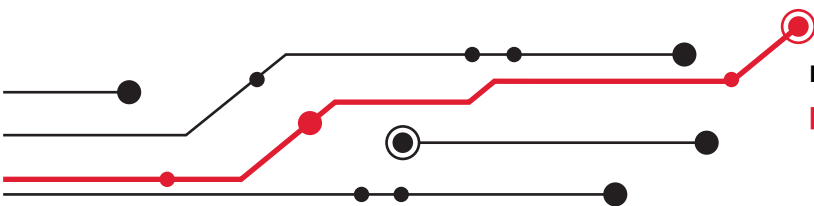

Accessibility Considerations

When choosing an install location, ensure the room is large enough for shelving and turnaround requirements and has a clear path from the building entrance.

Standard Features

- Proprietary cloud-based software accommodates special operational needs specific to package rooms

- Surface-mounted kiosk measures 10" W x 12.25" H x 4" D

- 7"x5" touchscreen, camera and barcode reader
